Utah 2024 Harvest Report

VERIFIED DWR REPORT PACKAGE

This report assembles 1,048 Utah DWR hunt-code rows across 12 species groups. The retained rows sum to 86,487 hunters afield and 33,582 harvested animals. DWR statewide estimates may differ from sums of hunt-code rows because DWR projects statewide and hunt-level estimates separately.

Harvested age is available for 328 rows; a DWR-reported three-year harvested-age value is available for 248 rows. A matching DWR management objective is available for 660 rows, and the evidence-gated U.O.G.A. Hunt Unit Quality score is publishable for 385 rows. A dash means the matched record does not support that measure; no value or score is inferred.

Permit counts in this historical harvest report are source-year harvest-report fields only. They are not the current quota authority and are not used directly as draw probability.

Compare permit utilization, harvest success, days hunted, satisfaction, harvested age, the applicable DWR objective, and the evidence-gated U.O.G.A. unit-quality profile. Summary medians are hunt-level medians, not statewide weighted estimates.

Utah DWR Management Objective Framework

The row-level objective column shows the applicable DWR target, unit of measure, current comparison value, and status when those values are available. Statewide qualitative frameworks are stated once below and referenced compactly in the row table.

Framework	Utah DWR objective	Unit of measure
Bear 3-year framework	Adult male age 5: Light >35%, Moderate 25-35%, Liberal <25%; female harvest: Light <30%, Moderate 30-40%, Liberal 40-45%; DNA population growth: Light +10 to +20%, Moderate -10 to +10%, Liberal -10 to -20%	strategy-dependent three-year measures
Turkey statewide program	Enhance 100,000 habitat acres statewide by 2029; increase turkey hunters 10% by 2029; increase wild turkey event participation 10% by 2029	statewide habitat acres and participation change

U.O.G.A. Hunt Unit Quality is a display-only 0-100 profile combining the matching biological measure, three-year harvest success, three-year satisfaction, and inverse effort. It is not a DWR score, not comparable across unlike species/hunt classes, and never changes permits or draw odds.
